

## World per capita GDP and international trade

---- 1999 estimates

International  
Trade >  
\$100,000

\$ 520,000

Imports

Exports

GDP Per Capita

The per capita Gross Domestic Production (GDP) measures all the value of finished products and services produced within a country in a given year and divided by its population (unit: U.S. dollars). This indicator reflects the standard of living of a country.

International trade is the exchange of goods and services between territories, including import and export (unit: U.S. dollars). The balance of trade is important to calculate GDP. The bars in the map present countries whose imports and exports both exceeded \$ 100,000 in 1999.
